

Research question: How are Frank Lloyd Wright’s residential buildings numerically distributed across different U.S. states?

Category: Buildings and structures by architect

Sub-category: [Modernist architecture by architect](#)

Sub-category: Frank_Lloyd_Wright_buildings

Sub-category: List_of_Frank_Lloyd_Wright_buildings

Methodology:

- 1-Data were scraped from Wikipedia.
- 2- Modernist architecture was selected for data scraping, specifically the architect "Frank Lloyd" was selected.
- 3- Frank Lloyd's buildings were scraped.
- 4- The dataset was filtered to include only residential buildings located in the United States.
- 5- Buildings were grouped by state to examine their numerical distribution.
- 6- Frequency counts were calculated for each state.
- 7- The results were visualized using a bar chart to illustrate the distribution of Frank Lloyd Wright’s residential works across U.S. states.

Data Fields:

- building_name
- state
- city
- building_type
- source_url → Wikipedia page

Rate Limit Approach: Since the data is scraped from a single page, it is not necessary.
